		Advanced Experimental Chemistry –IV	Practical -5	4

Purpose of the Program

The Importance of chemistry arises because so many other disciplines draw on certain chemical principles and concepts. The purpose of the postgraduate chemistry program at the university and college level is to prepare our students for all those fields where knowledge of chemistry is required including academia for careers as professionals in various industries and research institutions.

Program's Outcomes

- PO 1.** Students will have a firm foundation in the fundamentals and application of current chemical and scientific theories including those in analytical, inorganic, organic and physical chemistry.
- PO 2.** Students will be able to design and carry out scientific experiments as well as accurately record and analyze the results of such experiments.
- PO 3.** Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
- PO 4.** Students will be able to explore new areas of research in both chemistry and allied fields of science and technology.
- PO 5.** Students will appreciate the central role of chemistry in our society and use this as a basis for ethical behavior in issues facing chemists including an understanding of safe handling of chemicals, environmental issues and key issues facing our society in energy, health and medicine.
- PO 6.** Students will be able to explain why chemistry is an integral activity for addressing social, economic, and environmental problems.
- PO 7.** Students will be able to function as a member of an interdisciplinary problem-solving team.

PROGRAM SPECIFIC OUTCOMES (PSOS)	
BACHELOR (RESEARCH) IN CHEMISTRY	
Fourth Year	<p>Bachelor (Research) in Chemistry programme aims to introduce very important aspects of modern-day course curriculum, namely, 1. stereochemistry and bonding in main group compounds including compounds of boron, carbon and nitrogen with metals, metal-ligand equilibria in solution, metal -acid complexes, cluster compounds, polyoxometalates, nature of bonding in organic molecules, stereochemistry, pericyclic reactions, nucleophilic substitution reaction, mechanism of carbocation rearrangement, zero, first, second and third law of thermodynamics and their applications, concept of free energy, spontaneity, fugacity, thermodynamics of non-ideal solutions, experimental methods for kinetic studies, viz; conductometric, potentiometric and spectrophotometric methods, effect of temperature on rate of reaction, Arrhenius equation, kinetics of gaseous reactions on solid surface, condensation and addition polymerization reactions, symmetry and group theory in chemistry, x-ray diffraction, electron diffraction, chromatographic methods, radio analytical methods.</p> <p>This knowledge will make the students skilled to work in various chemical industries like cement industries, agro product, paint industries, rubber industries, petrochemical industries, food processing industries, fertilizer industries, pollution monitoring and control agencies etc. It will also enable the students to understand the importance of the biomolecules and the industrially important compounds including their physical and chemical nature and role in the daily life and also to understand the concept of chemistry to inter relate and interact to the other subject like mathematics, physics, biological science etc.</p>
Fifth Year	<p>Degree in Master of Science programme aims to introduce very important aspects of modern-day course curriculum, namely, medicinal chemistry, polymer chemistry, environmental chemistry, bioinorganic, bio-organic, organometallic, reagents in organic</p>

	<p>synthesis, nano chemistry, green chemistry, natural products and spectroscopic techniques. This knowledge will make the students skilled to work in various chemical industries like cement industries, agro product, paint industries, rubber industries, petrochemical industries, food processing industries, fertilizer industries, pollution monitoring and control agencies etc. It will also enable students for industrially important compounds including their physical and chemical nature and role in the daily life and also to understand the concept of chemistry to inter relate and interact to the other subject like mathematics, physics, biological science etc.</p> <p>Upon completion of a degree, chemistry students will able to employ critical thinking and scientific inquiry in the performance, design, interpretation and documentation of laboratory experiments, at a level suitable to succeed at an entry-level position in chemical industry or a chemistry graduate program. Various research institutions and industry people in the pharmaceuticals, polymers, and food industry sectors will surely value this course.</p>

Pattern of Examination Theory Papers

A. Theory

Each theory paper shall consist two sections A and B.

***Section A:** (Short answers type with reasoning); 25 marks, eight questions of five marks each, any five have to be attempted).*

***Section B:** (Long answers type);50 marks, one question of ten marks each. Five questions are compulsory (each question from each unit) with internal choice.*

B. Internal assessment

For each theory paper internal assessment shall be conducted periodically (in the form of class tests and/or assignments/ group discussion/ oral presentation/ overall performance) during the semester period. Total marks allotted to internal assessment shall be 25. The evaluated answer sheets/assignments have to be retained by the Professor In-Charge for the period of six months and can be shown to the students if students want to see the evaluated answer sheets. The marks obtained by the students shall be submitted to the Head of concerned department/ the Principal of the College for uploading onto the University examination portal.

C. Practical

The laboratory work of the students has to be evaluated periodically. The internal assessment (in the form of lab test, lab record, internal evaluation, assignment/home assignment and attendance) of total 25 marks for each semester shall be conducted during the semester. A minimum of 12 experiments covering all kinds of exercises have to be conducted during a semester. Maximum 15 marks of attendance and 10 marks of record and overall performance can be given to the students. In each semester practical examination of 75 marks has to be conducted by two examiners (External and internal) having duration of 2 days (6 hours each day) for I to IV Semester. The total number of students to be examined per batch should not be more than sixty. Marks obtained in the practical examination have to be submitted to the Head of the department/ Principal of the College. The Head of the Department/Principal of the College will make necessary arrangement for uploading the marks onto the University exam portal. The hard copy of the award list from portal has to be submitted to the Controller of Examination, Kumaun University, Nainital.

Semester-VII
Paper-1 (Theory)

Course Title: Advanced Inorganic Chemistry-I

Programme/Class: Bachelor (Research) in Chemistry	Year: Fourth	Semester: Seven
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Inorganic Chemistry-1	

Course outcomes: Upon successful completion of this course, the students will be able to describe the stereochemistry and bonding in main group compounds, stability of coordination compounds and factors affecting the stability of metal complexes. They will also learn about the structure, bonding and reaction chemistry of metal carbonyls, cluster compounds and polyoxometalates.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Content	Number of lectures
1	<p>Stereochemistry and Bonding in Main Group Compounds including Compounds of Boron, Carbon and Nitrogen with Metals</p> <p>(a) Stereochemistry and Bonding in Main Group Compounds Hybridization, Isovalent hybridization, Drago Rule, Bent rule, its applications and energetics of hybridization, Walsh Diagram (AB₂, AB₃ and AB₄ molecule), some simple reactions of covalently bonded molecules (Atomic inversion, Berry pseudorotation, nucleophilic substitution reactions, free radical mechanism).</p> <p>(b) Compounds of Boron, Carbon and Nitrogen with Metals: Metal borides, carbides and nitrides: preparation, properties, structures and application.</p>	20
2	<p>Substitution Reactions of Square Planar Complexes: Substitution reactions in square planar complexes: Types, mechanism, potential energy diagrams, transition states and intermediates. Factors affecting the substitution reaction. <i>Trans</i> effect and its applications in synthesis of complexes, theories of <i>trans</i> effect.</p>	20
3	<p>Cluster Compounds: Introduction, classification, higher boranes, carboranes, metalloboranes and metallocarboranes. Metal carbonyl and metal halide clusters. Clusters with metal-metal multiple bonds. Electron counting in clusters (Wade's rule), Isolobal analogy.</p>	20

Semester-VII
Paper-2 (Theory)
Course Title: Advanced Organic Chemistry-1

Programme/Class: Bachelor (Research) in Chemistry	Year: Fourth	Semester: Seven
Paper-2 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Organic Chemistry-1	

Course Outcomes: Upon successful completion of this course, the students should be able to describe the nature of bonding in organic molecules and their stereochemistry. They can able to understand the stereoselectivity, stereospecificity, regioselectivity, chemoselectivity, enantiomeric and diastereomeric excess. Basic understanding of the aliphatic and aromatic nucleophilic substitution reactions and pericyclic reactions will clarify their concepts in solving questions related to the same. They can describe the mechanism of carbocation rearrangement reactions. This course aims to introduce the students with basic understanding of chemical bonding in organic molecules, their stereochemistry, nucleophilic substitution, pericyclic reactions etc.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	<p>Reaction Intermediates:</p> <p>Carbocations: Classical and non-classical, neighbouring group participation, ion-pairs, molecular rearrangements (Wagner-Meerwein rearrangement, Benzilic acid rearrangement, Schmidt reaction), stability and reactivity of bridge-head carbocations.</p> <p>Carbanions: Generation, structure and stability, ambident ions and their general reactions (Aldol, Claisen, Wittig and Mannich reaction).</p> <p>Free Radicals: Generation, structure, stability and reactions, cage effects; radical-cations & radical anions, types of free radical reactions, free radical substitution mechanism, mechanism at an aromatic substrate, neighbouring group assistance. Reactivity for aliphatic and aromatic substrates at a bridgehead. Reactivity in the attacking radicals. The effect of solvents on reactivity. Allylic halogenation (NBS), oxidation of aldehydes to carboxylic acids, autooxidation, coupling of alkynes and arylation of aromatic compounds by diazonium salts.</p> <p>Carbenes: Formation and structure, reactions involving carbenes (Reimer Tiemann reaction).</p> <p>Nitrenes: Generation, structure and reactions of nitrenes.</p> <p>Arynes: Generation and reactivity of arynes, nucleophilic aromatic substitution reactions, S_NAr mechanism; Ipso effect.</p>	20

2	Stereochemistry A: Molecular symmetry and chirality: symmetry operations and symmetry elements, point group classification and symmetry number. Stereoisomerism: Classification, racemic modification, molecules with one, two or more chiral centres. Configuration, nomenclature, D, L, R, S and E, Z nomenclature. Axial and planar chirality and helicity (P & M); stereochemistry and configurations of allenes, spiranes, alkylidene, cycloalkanes, adamantanes, catenanes, biphenyls (atropisomerism), bridged biphenyls, ansa compounds and cyclophanes.	20
3	Stereochemistry B: Topicity and prostereoisomerism: Topicity of ligands and faces and their nomenclature, stereogenicity, cyclostereoisomerism; configurations, conformations and stability of cyclohexanes, (mono-, di- and tri-substituted), cyclohexenes, cyclohexanones, halocyclohexanones, decalines, decalols, decalones. Asymmetric induction; Cram's, Prelog's and Horeaus rules. Dynamic stereochemistry (cyclic and acyclic). Qualitative correlation between confirmation and reactivity- Curtin-Hammit principle. Stereochemistry of compounds containing N, S and P. chirogenicity, pseudoasymmetry and stereogeniccentre. Stereoselectivity, stereospecificity, regioselectivity and chemoselectivity. Enantiomeric and diastereomeric excess.	20

Paper-3 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Physical Chemistry-1	

Course Outcomes: This paper provides detailed knowledge of the zero, first, second and third law of thermodynamics and their applications, concept of free energy, spontaneity, fugacity etc. Upon successful completion of this course, the students should be able to describe the thermodynamics of non-ideal solutions, experimental methods for kinetic studies, viz; conductometric, potentiometric and spectrophotometric methods, effect of temperature on rate of reaction, Arrhenius equation, kinetics of gaseous reactions on solid surface, condensation and addition polymerization reactions.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	<p>Advanced Thermodynamics:</p> <p>Advanced Thermodynamics I: Laws of thermodynamics: Fundamental concepts, state and path dependent functions, determination of work done, enthalpy change, and internal energy change in reversible and irreversible expansion and compression, zero, first, second law of thermodynamics and their applications, entropy and its calculations, Nernst heat theorem and third law of thermodynamics, residual entropy.</p> <p>Advanced Thermodynamics-II: Free energy and its calculation, properties of Helmholtz free energy and Gibb's free energy, Clausius-Claypeyron equation, chemical potential and entropies. Partial molar properties; partial molar free energy, partial molar volume and chemical potential and their significance, Gibbs-Duhem equation, Concept of fugacity and its determination, chemical potential and fugacity, thermodynamic functions of mixing.</p>	24
2	<p>Thermodynamics of Non-ideal Solutions: Non-ideal systems; Excess functions for non-ideal solutions, activity, activity coefficient, Debye-Hückel theory for activity coefficient of electrolytic solutions, determination of activity coefficients, ionic strength.</p>	12
3	<p>Chemical Dynamics:</p> <p>Chemical Dynamics I: Third and general order reactions,</p>	24

	<p>Experimental methods for kinetic studies, <i>viz</i>; conductometric, potentiometric and spectrophotometric methods, effect of temperature on rate of reaction, Arrhenius equation. Chemical molecular dynamics: Collision theory of reaction rates, steric factor, activated complex theory, comparison of collision and activated complex theories, ionic reactions, kinetic salt effects, steady state concept, kinetic and thermodynamic control of reactions.</p> <p>Chemical Dynamics-II: Kinetics of gaseous reactions on solid surface, unimolecular and bimolecular surface reactions, kinetics of condensation and addition polymerization reactions, mechanism of H₂-Br₂, H₂-Cl₂ reactions, decomposition of the following compounds: acetaldehyde, ozone and H₂O₂.</p>

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in a mid-term exam, together with the performance of other activities which can include short exams, in-class or on-line tests, home assignments, group discussions or oral presentations.

Evaluation method	Marks
Mid-term exam/ in-class or on-line tests/ home assignments/ group discussions/ oral presentations	15 marks
Overall performance throughout the semester, Discipline, participation in different activities) & Attendance	10 marks

Course prerequisites: To study this course, a student must have had Passed Degree in Bachelor of Science with Chemistry as major subject.

Suggested equivalent online courses:

Further Suggestions:

Semester-VII
Paper-4 (Theory)

Course Title: Group Theory and Metal Ligand Bonding

Programme/Class: Bachelor (Research) in Chemistry	Year: Fourth	Semester: Seven
Paper-4 Theory Subject: Chemistry		
Course Code:	Course Title: Group Theory and Application	

Course Outcomes: This paper provides detailed knowledge of applications of group theory, X-ray diffraction, electron diffraction, chromatographic and radio analytical methods. Upon successful completion of this course, the students will be able to describe the elements of symmetry, point groups, orthogonality theorem, character table, Ramchandran diagram, electron diffraction, scattering, different types of chromatographic techniques and isotopic dilution technique.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Symmetry and Group Theory in Chemistry: Symmetry elements and symmetry operations, definitions of group and subgroup and their characteristics, relation between orders of and subgroup and their characteristics, relation between orders of a finite group and its subgroup. Conjugacy relation and classes of symmetry operations, point symmetry (or group) and its classification, Schonfliess symbols, representation of group by matrices (representation for the C_n , C_{nv} , C_{nh} etc. groups to be worked out explicitly), products of symmetry operations. Character of a representation. The great orthogonality theorem (without proof) and its importance. Character tables and their use in spectroscopy.	20
2	Metal π-Acid Complexes: Metal carbonyls: Introduction, preparation, properties, reactions, bonding and vibrational spectra. Metal nitrosyls: Preparation, properties, reactions, structure, bonding and vibrational spectra. EAN and 18-rule rule. Complexes of dinitrogen, dioxygen and tertiary phosphine.	20
3	Metal-Ligand Bonding: Sigma bonding in octahedral complexes: Classification of metal valence orbitals into sigma symmetry, formation of ligand group orbitals (LGOs) of sigma symmetry, Formation of molecular orbitals of sigma symmetry, construction of molecular orbital energy level diagram involving only sigma bond contribution from ligands, pi bonding in octahedral complexes: Classification of metal valence orbital into pi symmetry, Formation of LGOs of pi symmetry. Formation of pi MOs and construction of molecular orbital energy level diagram	20

	involving sigma and pi contribution from pi donor ligands, Sigma and pi bonding in tetrahedral complexes and square planar complexes.

Semester-VII, Paper-5 (Practical)
Course Title: Advanced Experimental Chemistry -I

Programme/Class: Certificate Course in Introductory Chemistry	Year: First	Semester: First
Paper-5 Practical Subject: Chemistry		
Course Code:	Course Title: Advanced Experimental Chemistry-I	

Course outcomes: After completing this course, the students will be able to test the inorganic mixtures of acidic and basic radicals in the given samples. Upon completion of this course, the students will have the knowledge and skills to: understand the laboratory methods and tests related to inorganic mixture analysis including the salts of normal and rare-earth elements and insoluble salts. Also, they can understand the quantitative estimation of organic molecules. The students will able to:

- ✓ Qualitatively estimate cations and anions in samples.
- ✓ Prepare different inorganic compounds.
- ✓ Quantitative estimation of percentage of hydroxyl groups, amines/ phenolic contents in organic compounds.
- ✓ Determine of iodine and saponification values of an oil sample.
- ✓ Determine of DO, COD and BOD of water samples.
- ✓ Identify the different organic compounds by spectroscopic methods.
- ✓ Separate and systematically identify two component organic mixture by water and bicarbonate separation.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 120

Unit	Contents	Number of Lectures
1	Laboratory hazards and safety precautions	5
2	Inorganic Salt Analysis: Qualitative analysis of mixtures of salts containing not more than eight radicals including: (i) Rare-earth element salts (two rare element ions) (ii) Interfering radicals (iii) Other anions, which have not been done in under graduate practical. (iv) Insolubles and simple salts	40
3	Inorganic Compound Synthesis: Preparation of selected inorganic compounds such as: i. [Ni(dmg) ₂] ii. [Cu(NH ₃) ₄]SO ₄ .H ₂ O iii. Cis-K[Cr(C ₂ O ₄) ₂ (H ₂ O) ₂] iv. Na[Cr(NH ₃) ₂ (SCN) ₄] v. [Mn(acac) ₃]	20

	vi. $K_3[Fe(C_2O_4)_3]$ vii. Prussian Blue, Turnbull's Blue viii. $Co[NH_3)_6][Co(NO_2)_6]$ ix. Cis- $[Co(trien)(NO_2)_2]Cl.H_2O$ x. $Hg [Co(SCN)_4]$ xi. $[Co(py)_2Cl_2]$ xii. $[Ni(NH_3)_6]Cl_2$ Or Quantitative estimation of metal ions by complexometric titration, direct and / or back titration, use of masking agents.	
4	Organic Quantitative Analysis: i. Determination of the percentage of number of hydroxyl groups in an organic compound by acetylation method ii. Estimation of amines/ phenols using bromate-bromide solution/ or acetylation method. iii. Determination of Iodine and Saponification values of an oil sample. iv. Determination of DO, COD and BOD of water sample.	35
5	Spectrophotometric (UV/VIS) Estimations: Spectroscopic estimations of Amino acids, Proteins, Carbohydrates, Cholesterol, Ascorbic acid, Aspirin and Caffeine Or Organic Qualitative Analysis: Separation and systematic identification of two component by (a) water separation (b) $NaHCO_3$ separation	20

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in viva voce, record and overall performance.

Evaluation method	Marks
Attendance	15
Viva voce/Record and overall performance	10

Course prerequisites: Passed Degree in Bachelor of Science with Chemistry and Opted Sem-VII Theory Paper-1 &2.

Suggested equivalent online courses:

Further Suggestions:

One exercise each from salt mixture analysis (acidic radicals), inorganic preparation, quantitative analysis and spectroscopic estimation of organic compounds shall be given in the examination.

Distribution of marks shall be as given below:

1. Inorganic salt analysis (Acidic and Basic radicals)	20
2. Inorganic Preparation	10
3. Quantitative Organic analysis	20
4. Spectrophotometric (UV/VIS) Estimations	10
5. Viva	15
6. Home assignment/internal assessment, lab record and attendance	25

Note:

- *The lab work of the student has to be evaluated and assessed carefully and periodically. A minimum of 12 experiments covering all the kind of exercises has to be performed during a semester. The semester lab record has to be maintained by the department/college as an official record.*
- *Less than zero mark will not be awarded.*
- *The total number of students to be examined per batch shall not be more than sixty.*
- *Duration of the practical examination shall be of 02 days (06 hours per days).*
- *Marks obtained in the practical examination have to be submitted to the Head of the department/ Principal of the College. The Head of the Department/Principal of the College will make necessary arrangement for uploading the marks onto the University exam portal. The hard copy of the award list from portal has to be submitted to the Controller of Examination, Kumaun University, Nainital*

SEMESTER VIII
Paper 1 (Theory)
Course Title: Advanced Inorganic Chemistry-II

Programme/Class: Bachelor (Research) in Chemistry	Year: Fourth	Semester: Eighth
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Inorganic Chemistry II	

Course outcomes: This course will provide a deep knowledge of metal ligand bonding through MOT. Students will gain an understanding of

- ✓ Sigma and pi bonding in transition metal complexes through molecular orbital energy diagrams.
- ✓ Reaction mechanism of octahedral complexes.
- ✓ This course gives a broader theoretical picture of electronic spectra of transition metal complexes.
- ✓ It describes selection rules, charge transfer, Orgel and Tanabe Sugano diagrams for explaining possible electronic transitions and colour of complexes.
- ✓ It enables to understand the magnetic behaviour of transition metal complexes which will helpful in adding more aspects in application part of transition metal complexes.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Reaction Mechanism of Octahedral Complexes I: Energy profile of a reaction, reactivity of metal complexes, kinetic application of valence bond and crystal field theories, kinetics of octahedral substitution, acid hydrolysis, factors affecting acid hydrolysis, base hydrolysis, conjugate base mechanism, direct and indirect evidences in favour of conjugate mechanism, anation reactions, reactions without metal ligand bond cleavage.	15
2	Reaction Mechanism of Octahedral Complexes II: Redox reactions, electron transfer reactions, mechanism of one electron transfer reactions, outer-sphere type reactions. Complimentary and non-complimentary electron transfer reactions, cross reactions and Marcus-Hush theory, inner sphere type reactions.	15
3	Electronic Spectra of Transition Metal Complexes: Introduction, types of transition, factors affecting band width and intensity, spectroscopic ground state terms (Russell Saunders coupling/ L-S coupling/Spin orbit coupling), determination of spectroscopic terms, atomic terms. Microstates- calculation and representation, Mullikan terms (molecular term), splitting of atomic terms in octahedral and tetrahedral field. Correlation	30

	<p>diagram (d^1, d^2 configuration in details), Orgel diagram, ($d^1 - d^{10}$ octahedral and tetrahedral complexes), selection rules (spin and Laporte) and their relaxation. Discussion of the electronic spectrum of $d^1 - d^9$ octahedral and tetrahedral complexes. Inter-electronic repulsion parameters-Racah parameters (A, B, C), Nephelauxetic effect. Ground state terms symbol of transition metal complexes. Tanabe Sugano diagram ($d^1 - d^9$ octahedral complexes). Application of Tanabe-Sugano diagram- Calculation of B, Δ_o, β. Spin-crossover in coordination compounds. Charge transfer spectra- Introduction, types, factors affecting. spectroscopic method of assignment of absolute configuration in optically active metal chelates and their stereochemical information</p> <p>b) Electronic angular momentum in diatomic molecules (classification of states)- calculation of states</p>

SEMESTER VIII
Paper-2 (Theory)
Course Title: Advanced Organic Chemistry-II

Programme/Class: Masters in Chemistry	Year: Fourth	Semester: Eighth
Paper-2 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Organic Chemistr-II	

Course outcome: This course will provide a deep knowledge of reaction mechanism. After completion of this course, the students will be able to understand

- ✓ The mechanism and stereochemistry electrophilic substitution reactions.
- ✓ Free radical reaction mechanism.
- ✓ Mechanism of addition to carbon-carbon and carbon-hetero multiple bonds.
- ✓ The names reactions and the mechanism and stereochemistry of all the mentioned reactions will enhance their skill to understand the various important methods of synthesizing compound which industrially important. This will not only help them to clear the competitive exams but also increase the job opportunities related to these industries.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	<p>Reaction mechanism-I: Aliphatic Electrophilic Substitution: Biomolecular mechanisms- S_E2 and S_E1. The S_E1 mechanism, electrophilic substitution accompanied by double bonds shifts. Effect of substrates, leaving group and the solvent polarity on the reactivity.</p> <p>Aliphatic Nucleophilic Substitution: The S_N2, S_N1, mixed S_N1 and S_N2, S_Ni and SET mechanisms. Nucleophilic substitution at an allylic, aliphatic trigonal and a vinylic carbon. Reactivity effects of substrate structure, attacking nucleophile, leaving group and reaction medium, phase transfer catalysis and ultrasound, ambident nucleophile, regioselectivity. Neighbouring group mechanism, neighbouring group participation by π and σ bonds, anchimeric assistance. Classical and nonclassical carbocations, phenonium ions, norbornyl system.</p> <p>Elimination reactions: The $E2$, $E1$ and $E1cB$ mechanisms and their spectrum. Orientation of the double bond. Reactivity-effects of substrate structures, attacking base, the leaving group and the medium. Mechanism and orientation in pyrolytic elimination</p>	25
2	<p>Reaction mechanism-II: Aromatic Nucleophilic Substitution: The S_NAr, S_N1, benzyne and S_N1 mechanism. Reactivity-effect of substrate structure leaving group and attacking nucleophile. The Von-Richter, Sommelet-Hauser and Smiles rearrangements.</p> <p>Aromatic Electrophilic Substitution: The arenium ion</p>	25

	mechanism, orientation and reactivity, energy profile diagrams. The ortho/para ratio, ipso attack, orientation in other ring systems. Diazonium coupling.	
3	Name Reactions: Vilsmeier reaction, Gattermann-Koch reaction, Sandmeyer reaction, Hunsdiecker reaction, Michael reaction. Sharpless asymmetric epoxidation, Aldol, Knoevenagel, Claisen, Mannich, Benzoin, Perkin and Stobbe reactions, Wittig reaction, Heck reaction, Still reaction, Sonogashira, Negishi coupling, Grubbs Catalyst.	10

SEMESTER VIII
Paper-3 (Theory)
Course Title: Advanced Physical Chemistry-II

Programme/Class: Bachelor (Research) in Chemistry	Year: Fourth	Semester: Eighth
Paper-3 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Physical Chemistry-II	

Course Outcomes: This paper provides detailed knowledge of surface, polymer, electro and quantum chemistry. Upon successful completion of this course, the students should be able to describe Gibb's adsorption isotherm, Freundlich and Langmuir adsorption isotherm, BET method, applications of polymers, Debye-Huckel theory, Debye-Huckel-Onsagar theory and concept of quantum chemistry.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	<p>Surface and Polymer Chemistry</p> <p>Surface Chemistry: Gibb's adsorption isotherm, Freundlich and Langmuir adsorption isotherms, determination of free energy of adsorption, BET theory for multilayer adsorption with derivation, determination of surface area using BET method, catalytic activity on solid surfaces, macromolecules.</p> <p>Polymer Chemistry: Polymers and their general applications, classification of polymers, chain configuration of polymers, liquid crystals and their applications. Molecular mass, number and mass average molecular mass, molecular mass determination using osmometry, viscometry, diffusion and light scattering methods.</p>	24
2	<p>Advanced Electrochemistry: Determination of activity coefficient, Debye-Huckel theory of strong electrolytes with derivation, ionic atmosphere and thickness of ionic atmosphere, Debye-Huckel-Onsagar theory, theory of conduction, Onsagar equation including mathematical deduction, overvoltage and decomposition potential.</p>	12
3	<p>Advanced Quantum Chemistry</p> <p>Advanced Quantum Chemistry-I: de-Broglie concept and de-Broglie equation, physical interpretation and properties of wave functions, Linear, Laplacian, Linear-momentum and Hamiltonian operators, postulates of quantum mechanics, eigen values, eigen functions, normalization and orthogonalization, derivation of the Schrodinger's wave equation, concept of cartesian and spherical coordinates.</p>	24

	Advanced Quantum Chemistry-II: Schrodinger's wave equation general and detailed discussion on the applications of Schrodinger's wave equation to some model systems <i>viz.</i> particles in a 1D-, 3D- box, harmonic oscillator, rigid rotator and hydrogen atom.

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Nuclear Magnetic Resonance Spectroscopy: Nuclear Spin, nuclear resonance, saturation, shielding of magnetic nuclei, chemical shift and its measurements, factors influencing the chemical shift. Deshielding, spin-spin interaction, factors influencing coupling constant (J). Classification (ABX, AMX, ABC, A ₂ B ₂ etc.), spin decoupling, basic idea about instruments, NMR studies of nuclei other than proton; ¹³ C, ¹⁹ F and ³¹ P. Advantages of FT NMR. Use of NMR in medical diagnostics. NOE, simplification of complex spectra by the use of Shift reagent and field strength. Nuclear Overhauser Effect (NOE). ¹³ C NMR spectroscopy: General considerations, chemical shift (aliphatic, olefinic, alkyne and aromatic hetero aromatic and carbonyl carbon). Coupling constants. Two dimensional NMR spectroscopy - COSY, HETCOR, NOESY, DEPT, INEPT, APT and INADEQUATE techniques.	25
2	Mass Spectrometry: Introduction, ion production-EI, CI, FD and FAB, factors affecting fragmentation, ion analysis, ion abundance. Mass spectral fragmentation of organic compounds, common functional groups, molecular ion peak, metastable peak, McLafferty rearrangement. Nitrogen rule, example of Mass fragmentation of class of organic compounds.	15
3	Infrared Spectroscopy: Instrumentation and simple handling. Selection rules, normal modes of vibration, group frequencies, overtones, hot bands, factors affecting the bond positions and	20

	<p>intensities, Characteristic vibrational frequencies of alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, phenols, amines and carbonyl compounds (ketones, aldehydes, esters, amides, acids anhydrides, lactones, lactams and conjugated carbonyl compounds). Effect of hydrogen bonding, solvent effect on IR of gaseous, solids and polymeric materials. Review of linear harmonic oscillator, vibrational energies of diatomic molecules, zero point energy, force constant and bond. Strength' anharmonicity, Morse potential energy diagram, vibration-rotation spectroscopy, P, Q, R branches. Breakdown of Oppenheimer approximation; vibrations of polyatomic molecules. far IR region. Simple applications.</p> <p>Problems based on spectroscopic data viz. NMR, IR Spectroscopy and Mass spectrometry.</p>

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in a mid-term exam, together with the performance of other activities which can include short exams, in-class or on-line tests, home assignments, group discussions or oral presentations.

Evaluation method	Marks
Mid-term exam/ in-class or on-line tests/ home assignments/ group discussions/ oral presentations	15
Overall performance throughout the semester, Discipline, participation in different activities) & Attendance	10

Course prerequisites: To study this course, a student must have had passed theory papers of VII semester.

Suggested equivalent online courses:

Further Suggestions:

Semester-VIII
Paper-5 (Practical)
Course Title: Advanced Experimental Chemistry-II

Programme/Class: Bachelor (Research) in Chemistry	Year: Fourth	Semester: Eighth
Paper-5 Practical Subject: Chemistry		
Course Code:	Course Title: Advanced Experimental Chemistry-II	

Course outcomes:

Upon completion of this course, the students will have the knowledge and skills to: understand the laboratory methods and tests related to organic and physical experiments. The students will be able to

- ✓ Synthesize organic compounds via two steps.
- ✓ Determine the velocity constant, activation energy, effect of temperature and concentration on the rate constant, partition coefficients etc.

Credits: 4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures: 120

Unit	Contents	Number of Lectures
1	Laboratory hazards and safety precautions	10
2	<p>Organic Chemistry</p> <p>(a) Multi-step preparation</p> <p>(i) Photochemical reaction: Benzophenone \longrightarrow Benzopinacol \longrightarrow Benzpinacolone</p> <p>(ii) Beckmann rearrangement: Benzanilide from benzene Benzene \longrightarrow Benzophenone \longrightarrow Benzophenoneoxime \longrightarrow Benzanilide.</p> <p>(iii) Benzilic acid rearrangement: Benzilic acid from benzoin Benzoin \longrightarrow Benzil \longrightarrow Benzilic acid</p> <p>(iv) Synthesis of heterocyclic compounds Skraup synthesis: Preparation of quinoline from aniline. Fischer indol synthesis: Preparation of 2-phenyl indole from phenylhydrazine.</p> <p>(v) Enzymatic synthesis Enzymatic reduction: Reduction of ethyl acetoacetate using Baker's yeast to yield enantiomeric excess of S(+)-ethyl-3-hydroxybutanoate and determine its optical purity. Biosynthesis of ethanol from sucrose</p> <p>(vi) Synthesis using microwaves (vii) Alkylation of diethyl malonate with benzyl chloride. (viii) Synthesis using phase transfer catalyst (ix) Alkylation of diethyl malonate or ethylacetoacetate with an alkyl halide.</p> <p>(b) Paper Chromatography/Thin Layer Chromatography</p> <p>Separation and identification of the sugars present in the given</p>	50

	mixture of glucose, fructose and sucrose etc. By Paper chromatography, thin layer chromatography and determination of R_f values.	
3	Physical Chemistry: (i) Determination of the velocity constant of acid catalyzed hydrolysis of an ester. (ii) Determination of activation energy of a reaction. (iii) Determination of Frequency factor of a reaction by kinetic studies. (iv) Validity of Arrhenius equation. (v) Determination of the effect of change in temperature on rate constant of a reaction. (vi) Determination of the effect of change in concentration of the reactants on rate constant of a reaction. (vii) Determination of the effect of change in concentration of the catalyst on rate constant of a reaction. (viii) Determination of the effect of change in ionic strength on the rate constant of a reaction. (ix) Determination of the rate constant for the oxidation of iodide ions by hydrogen peroxide. (x) Flowing Clock reactions (Ref. Experiments in Physical Chemistry by Showmaker). (xi) Study of the adsorption of an acid by charcoal. (xii) Validity of Freundlich's Adsorption isotherm. (xiii) Determination of Partition Coefficients. (xiv) Determination of molecular surface energy of a liquid by Stalagmometer method. (xv) Determination of association factor of the given liquid by drop-pipette method.	40

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in viva voce, record and overall performance.

Evaluation method	Marks
Attendance	15
Viva voce/Record and overall performance	10

Course prerequisites: To study this course, a student must have had opted for Bachelor (Research) in Chemistry VIII sem.

Suggested equivalent online courses:

Further Suggestions:

One exercise from physical chemistry and two exercise from organic chemistry (including organic synthesis and chromatography) shall be given in the examination.

Distribution of marks shall be as given below:

7.	Organic Exercise	30
8.	Physical Exercise	30
9.	Viva	15
10.	Home assignment/internal assessment, lab record and attendance	25

Note:

- *The lab work of the student has to be evaluated and assessed carefully and periodically. A minimum of 12 experiments covering all the kind of exercises has to be performed during a semester. The semester lab record has to be maintained by the department/college as an official record.*
- *Less than zero mark will not be awarded.*
- *The total number of students to be examined per batch shall not be more than sixty.*
- *Duration of the practical examination shall be of 2 days (6 hours each day).*
- *Marks obtained in the practical examination have to be submitted to the Head of the department/ Principal of the College. The Head of the Department/Principal of the College will make necessary arrangement for uploading the marks onto the University exam portal. The hard copy of the award list from portal has to be submitted to the Controller of Examination, Kumaun University, Nainital*

Semester-IX
Paper-1 (Theory)
Course Title: Solid State Chemistry

Programme/Class: Master of Chemistry	Year: Fifth	Semester: Ninth
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Solid State Chemistry	

Course outcome: This course will be helpful in understanding basics of polymer chemistry. After completion of this course, the students will be able to learn the types of polymers, their characterization, structure and properties along with different methods of polymer processing. This course will be beneficial to the students who are searching jobs in the field of polymer industry.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Content	Number of lectures
1	Solid State Reactions, Crystal Defects and Non-stoichiometry: General principles, experimental procedures, co-precipitation as a precursor to solid state reactions, kinetics of solid state reactions, Perfect and imperfect crystals, intrinsic and extrinsic defects- point defects, line and plane defects, vacancies- Schottky defects and Frenkel defects	20
2	Electronic Properties and Band Theory: Metals, insulators and semiconductors, electronic structure of solids-band theory. Band structure of metals, insulators and semiconductors. Intrinsic and extrinsic semiconductors, doping semiconductors, p-n junctions, super conductors.	20
3	Organic Solids, Fullerenes, Molecular Devices: Electrically conducting solids, organic charge transfer complexes, organic metals, new super conductors, magnetism in organic materials, fullerenes- doped, fullerenes as superconductors. Molecular rectifiers and transistors, artificial photosynthetic devices.	20

Books Recommended:

- i. G.W. Castellan, Physical Chemistry, 4 th Ed. Narosa.
- ii. R.G. Mortimer, Physical Chemistry, 3 rd Ed. Elsevier: NOIDA, UP.

Semester-IX
Paper-2 (Theory)
Course Title: Inter Disciplinary Topics in Chemistry

Programme/Class: Master of Chemistry	Year: Fifth	Semester: Ninth
Paper-2 Theory Subject: Chemistry		
Course Code: CHEM 301	Course Title: Inter Disciplinary Topics in Chemistry	

Course outcomes: This course will provide a broad foundation in green chemistry, medicinal chemistry, polymer chemistry, environmental chemistry that stresses scientific reasoning and analytical problem solving with a perspective. Students will gain an understanding of

- ✓ Molecular geometries, physical and chemical properties of green reagents.
- ✓ This course gives a broader theoretical and practical knowledge of nano chemistry, medicinal chemistry, polymer chemistry and environmental chemistry.
- ✓ It describes scope of nanomaterials, chemical methods for synthesis of nanomaterials, methods of characterization.
- ✓ It enables to understand the Chemistry of antineoplastic agents and cardiovascular drugs.
- ✓ The chapter stereochemistry gives the clear picture of terminology and nomenclature, aerosols, photo chemical smog, BOD and COD.

Credits:4	Elective
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Content	Number of lectures
1	Green Chemistry: Basic principles of green chemistry. Designing green reagents: green catalyst phase transfer catalysis for green synthesis choice of starting materials, organic synthesis in solid phase reagents, versatile ionic liquids as Scherrer method.	20
2	Nano chemistry: History, definition and scope of nanomaterials, chemical methods for synthesis of nanomaterials, methods of characterization, determination of particle size and surface structure by Scanning Electron microscopy, Transmission Electron microscopy, surface area analysis and Debye-Scherrer method.	20
3	Environmental Chemistry: Concept and scope, composition of atmosphere, terminology and nomenclature, aerosols, photo chemical smog, BOD and COD.	20

Further Suggestions:

Semester-IX
Paper-3 (Theory)

Course Title: Pericyclic Reactions and Photochemistry

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Ninth
Paper-3 Theory Subject: Chemistry		
Course Code:	Course Title: Pericyclic Reactions and Photochemistry	

Course outcome: This paper provides detailed knowledge of bioinorganic, bioorganic and biophysical chemistry. They will get information about the synthesis and classification, extraction, purification, uses of enzymes and coenzymes, essential and trace metals and role of metal ions in biological processes. This course will bring to light the forces and mechanisms which are essential to sustain all the life on earth. The drug designing and the impacts of these compounds on life processes is based on the understanding of all these areas in chemistry. The research and development of novel pharmaceutical products depends on these methods. This will help the students to enter in the area of research and development in all related fields.

Credit: 4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:
Total No. of Lectures- = 60	

Unit	Contents	Number of Lectures
1	Pericyclic Reactions: Molecular orbital symmetry, Frontier orbitals of ethylene, 1,3-butadiene, 1,3,5-hexatriene and allyl system. Classification of pericyclic reactions. Woodward-Hoffmann correlation diagrams. FMO and PMO approach. Electrocyclic reactions- conrotatory and disrotatory motions, 4n, 4n+2 and allyl system. Cycloadditions- antarafacial and suprafacial additions, 4n and 4n+2 systems, 2+2 addition of ketenes, 1,3-dipolar cycloadditions and cheletropic reactions. Sigmatropic rearrangements- suprafacial and antarafacial shifts of H, Sigmatropic shifts involving carbon moieties, 3,3- and 5,5 sigmatropic rearrangements. Claisen, Cope and Aza-Cope rearrangements. Fluxional tautomerism, Ene reaction.	30
2	Basics of Photochemistry: Laws of photochemistry, electronically excited states-life times, Energy dissipation by radiative and non-radiative processes, Franck-Condon principle, Photochemical stages- primary and secondary processes. photo-physical reactions, Jablonskii diagram, photosensitization, quantum yield and its determination, fluorescence, phosphorescence and chemi luminiscence with suitable examples.	15

3	<p>Photochemistry of Organic Compounds: Photochemistry of alkenes; cis-trans isomerization, ; photochemical additions; reactions of 1,3- and 1,4-dienes; dimerization, Norrish type I & II reactions (cyclic and acyclic); α,β-unsaturated ketones; β,γ-unsaturated ketones; cyclohexenones (conjugated,cyclohexadienones (cross conjugated & conjugated); paterno- Buchi reaction, photoreductions; photochemistry of aromatic compounds, isomerisations reactions , Dewar and prismanes in isomaerisations, singlet oxygen reactions, photo Fries rearrangement of ester & anilidets, Barton reaction, Hoffmann-Loeffler-Freytag reaction.</p>	
---	---	--

Semester-IX
Paper-4 (Theory)

Course Title: Chemistry of Biological System

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Ninth
Paper-4 Theory Subject: Chemistry		
Course Code:	Course Title: Chemistry of Biological System	

Course outcome: This paper provides detailed knowledge of bioinorganic, bioorganic and biophysical chemistry. They will get information about the synthesis and classification, extraction, purification, uses of enzymes and coenzymes, essential and trace metals and role of metal ions in biological processes. This course will bring to light the forces and mechanisms which are essential to sustain all the life on earth. The drug designing and the impacts of these compounds on life processes is based on the understanding of all these areas in chemistry. The research and development of novel pharmaceutical products depends on these methods. This will help the students to enter in the area of research and development in all related fields.

Credit: 4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:
Total No. of Lectures- = 60	

Unit	Contents	Number of Lectures
1	Bioinorganic Chemistry: Essential and non-essential elements, toxic elements (Al, Hg, Cd, Pb). Role of metal ions in biological processes: K^+ , Na^+ , Ca^{2+} , Mg^{2+} , Mn^{2+} , Fe^{3+} , Co^{2+} , Ni^{2+} , Cu^{2+} , Zn^{2+} . Ion transport through cell membrane: active transport (ionophores and ion channels) and passive transport (ion pumps: Na^+/K^+ pump). Nitrogen fixation: definition, types, mechanism, structure of nitrogenase, factors affecting nitrogen fixation. Metal complexes in transmission of energy: chlorophyll a, chlorophyll b, light dependent reaction (photosystem I & photosystem II), Haeme proteins: L definition, porphin, porphyrin, haeme groups, structure and biological functions of cytochrome P450, peroxidase, catalase, myoglobin, haemoglobin, and oxygen uptake. Metalloproteins: function of metalloproteins, electron transfer (cytochrome, rubredoxin, plastocynin), light harvesting (chlorophyll), catalyst (superoxide dismutase, carbonic anhydrase), oxygen storage and transport.	15
2	Bioorganic Chemistry: Introduction, Nomenclature and classification, extraction, purification and uses of enzymes in food drink industry and clinical therapy. Chemical and biological catalysis, remarkable properties of enzymes like catalytic power, specificity and regulation. Proximity effects and molecular	30

	adaption. Enzyme kinetics, Michaelis-Menten and Lineweaver-Burk plots, reversible and irreversible inhibition. Transition state theory, Fisher's lock and key and Koshland's induced fit hypothesis, concept and identification of active site by site-directed, mutagenesis. Acid-base catalysis, covalent catalysis, strain or distortion. Example of some typical enzyme mechanisms for chymotrypsin, ribonuclease, lysozyme, carboxypeptidase A and Nitrogenase. Cofactors as derived from vitamins, coenzymes, prosthetic groups, apoenzymes. Structure and biological functions of coenzymes A, thiamine pyrophosphate, NAD ⁺ , NADP ⁺ , FMN, FAD, lipoic acid and vitamin B ₁₂ . Enzyme catalysed metabolic reactions.	
5	Biophysical Chemistry: Forces involved in biopolymer interactions. Electrostatic charge and molecular expansion, hydrophobic forces, osmotic pressure, membrane equilibrium. Bioenergetics: Standard free energy change in biological reactions. Hydrolysis of ATP, synthesis of ATP from ADP. Coupling of ATP cleavage to endergonic processes Size, shape and molecular mass of biopolymer.	15

Semester-IX
Paper-5 (Practical)

Course Title: Advanced Experimental Chemistry -III

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Ninth
Paper-5 Practical Subject: Chemistry		
Course Code:	Course Title: Advanced Experimental Chemistry -III	

Course outcomes: After completing this course, the students will be able to determine the concentrations of inorganic compounds through complexometric titration and gravimetric estimation. They can separate metal ions using paper chromatography. Physical experiments will be helpful in determining order of reaction, EMF of cell, conductivity, solubility and degree of dissociation/association of electrolytes.

Credits: 4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Pre-labs	10
2	<p>Inorganic Chemistry: Quantitative analysis of binary mixture of metal ions involving volumetric (by complexometric titration using masking and demasking agents) and gravimetric analysis (Copper-Nickel, Copper-Zinc, Silver-Copper, Silver-Nickel, Silver-Magnesium, Copper-Magnesium). Chromatography: separation of cations and anions by paper/TLC/Ion Exchange chromatography</p>	45
3	<p>Physical Chemistry Practical exercises</p> <ol style="list-style-type: none"> i. Determination of the order of reaction by isolation method ii. Determination of the order of reaction by half life period method iii. Determination of the order of the reaction by Integration method. iv. Determination of the entropy of activation of a reaction. v. Determination of free energy change of a reaction. vi. Determination of the equilibrium constant of a reaction. vii. Determination of pH by electrical conductivity method. viii. Hydrolysis of the salts by electrical conductivity method ix. Hydrolysis of the salts by EMF. x. Determination of the dissociation constant of a weak acid by conductivity method. xi. Determination of the equivalent conductivity of a strong electrolyte conductometrically. xii. Determination of the equivalent conductivity at infinite 	45

	dilution of weak electrolyte conductometrically. xiii. Validity of Ostwald's dilution law. xiv. Determination of the degree of dissociation/ association conductometrically. xv. Determination of solubility and solubility product of sparingly soluble salts (e.g., PbSO_4 , BaSO_4) conductometrically.

Semester-X
Paper-1 (Theory)

Course Title: Spectroscopic Techniques-II

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Spectroscopic Techniques-II	

Unit	Contents	Number of Lectures
1	Electron Spin Resonance Spectroscopy: Basic Principles, zero field splitting and Kramer's degeneracy, factors affecting the 'g' value. Hyperfine coupling isotopic and anisotropic hyperfine coupling constants, spin Hamiltonian, spin densities, measurement techniques, spin polarization for atoms and transition metal ions, spin-orbit coupling and significance of g-tensors, application to inorganic and organic free radicals and to transition metal complexes (having an unpaired electron) including biological systems. Structure elucidation through problems. Structure elucidation through problems	25
2	Mossbauer Spectroscopy: Basic principles, spectral parameters and spectrum display. Application of the technique to the studies of (i) bonding and structure of Fe ⁺⁺ and Fe ⁺⁺⁺ compounds (ii) Sn ⁺² and Sn ⁺⁴ compounds-nature of M-L bond, coordination number, structure and (iii) detection of oxidation state and inequivalent MB atoms. Structure elucidation through problems	25
3	Raman Spectroscopy: Classical and quantum theories of Raman effect. Pure rotational, vibrational and vibrational-rotational Raman spectra, selection rules, mutual principles. Resonance Raman spectroscopy, Coherent anti-stokes Raman Spectroscopy (CARS), Simple applications. Structure elucidation through problems.	10

Semester-X
Paper-2 (Project work)

Course Title: Research Project/Instrumentation/Industrial Training

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-2 Project Subject: Chemistry		
Course Code:	Course Title: Research Project/Instrumentation/Industrial Training	

Course outcome: The students will become proficient in various analytical tools and their industrial applications.

Unit	Contents	Lecture
1	Research Project in various fields related to Chemistry. Hands on training in instruments like UV-Visible spectrophotometer, FTIR, Gas spectrometer, TGA, DSC, Spray dryer, HPLC	60

Semester-X
Paper 3 (Theory Inorganic Chemistry Group)
Course Title: Inorganic Polymers

Programme/Class: Master of Chemistry	Year: Fifth	Semester: Ninth
Paper-3 Theory Subject: Chemistry		
Course Code:	Course Title: Inorganic Polymers	

Course outcome: This course will be helpful in understanding basics of polymer chemistry. After completion of this course, the students will be able to learn the types of polymers, their characterization, structure and properties along with different methods of polymer processing. This course will be beneficial to the students who are searching jobs in the field of polymer industry.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Content	Number of lectures
1	Basics of Inorganic Polymers: Importance of polymers, basic concepts: monomers, repeat units, degree of polymerization. Linear, branched and network polymers. Classification of polymers, polymerization: condensation, addition, radical chain-ionic and co-ordination and co-polymerization. Polymerization conditions and polymer reactions Kinetics of polymerization. Stereochemistry and mechanism of polymerization. Polymerization in homogeneous and heterogeneous systems.	20
2	Structure and Properties: Morphology and order in crystalline polymers-configurations of polymer chains: Crystal structures of polymers. Morphology of crystalline polymers, strain-induced morphology, crystallization and melting. Polymer structure and physical properties-crystalline melting point (T _m); melting points of homogeneous series, effect of chain, flexibility and other steric factors, entropy and heat of fusion. The glass transition temperature (T _g), relationship between T _m and T _g , effects of molecular weight, diluents, chemical structure, chain topology, branching and cross linking.	
3	Polymer Characterization: Polydispersion, average molecular weight concept: number average, weight average and viscosity average molecular weights. Polydispersity and molecular weight distribution. Measurement of molecular weight: end-group,	20

	viscosity, light scattering, osmotic and ultracentrifugation methods. Analysis and testing of polymers, chemical analysis of polymers, spectroscopic methods, X-ray diffraction study. Microscopy. Thermal analysis and physical testing- tensile strength. Fatigue impact. Tear resistance. Hardness and abrasion resistance.	
--	--	--

Books Suggested:

- i. F.W. Billmeyer Jr., Text Book of Polymer Science, Wiley.
- ii. N.V. Vishwanathan and J. Sreedhar, Polymer Science, V.R. Gowarker, Willey-Eastern.
- iii. K. Takemoto Y. Inaki and R.M. Ottanbrite, Functional Monomers and Polymers.
- iv. H.R. Alcock and F.W. Lambe, Contemporary Polymer Chemistry, Prentice Hall.
- v. J.M.G. Cowie, Physics and Chemistry of Polymers, Blakie Academic and Professional.
- vi. N.H. Ray, Inorganic Polymers, Academic Press, N. York.
- vii. J.M. Lehn, Supramolecular Chemistry, VCH.

Semester-X
Paper 4 (Theory Inorganic Chemistry Group)
Course Title: General and Organometallic Chemistry

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-4 Theory Subject: Chemistry		
Course Code:	Course Title: General and Organometallic Chemistry	

Course Outcomes: Upon successful completion of this course, the students will be able to describe inorganic free radical reactions and chemistry of silicates and aluminosilicates, They will also able to understand the organometallic compounds of transition metals including sigma and pi bonding ligands. They will also get acquainted with the chemistry of fluxional molecules. The students will learn about chemistry and properties of some industrially important inorganic materials and their applications in various industries. It will assist them to get a suitable job in the relevant industrial and scientific field.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Organic Derivatives of Transition Metals: Alkyls, aryls and acyls of transition metals, nature of metal carbon bond, routes of synthesis, stability, decomposition pathways, stabilization, Alkyls, aryls and acyls of s-block and p-block elements, synthesis, stability, reactivity. Comparison between transition and non-transition element derivatives.	20
2	Compounds of Metal-Carbon Multiple Bonds and Fluxional Organometallic Compounds: Synthesis, properties, nature of bonding and structural features of π -bonded organo-metallic compounds (π -complexes) with unsaturated organic molecules: alkenes, alkynes, chelating olefinic ligands, allyl, dienes-butadiene, cyclobutadiene, cyclopentadiene, dienyl-cyclopentadienyl, cyclohexadienyl and arene complexes. Important reactions relating to nucleophilic and electrophilic attack on ligands, role in organic synthesis. Fluxionality and dynamic equilibria in compounds such as η^3 - allyl and dienyl complexes, their characterization.	20
3	Catalysis Mechanism of Some Reactions: Stoichiometric reactions for catalysis, oxidative-addition, migratory insertion, reductive elimination, homogeneous catalytic Hydrogenation, Zeigler-Natta polymerization of olefins, catalytic reactions involving carbon monoxide such as hydroformylation of olefins (oxo-reaction), Wacker's process.	20

Books Recommended:

Semester-X
Paper 5 (Theory Organic Chemistry Group)
Course Title: Organic Synthesis

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-5 Theory Subject: Chemistry		
Course Code:	Course Title: Organic Synthesis	

Course outcome: Upon successful completion of this course, the students will be able to understand use of the reagents in organic synthesis. The roadmap to synthesize important and new molecules having wide applications in the field of pharmacy, nutraceuticals, agricultural sector and luxury industries will help the students to gain a foothold in industries related to the above mentioned sectors.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	<p>Oxidation: Introduction. Different oxidative processes. Hydrocarbons-alkenes, aromatic rings, saturated C-H groups (activated & nonactivated). Alcohols, diols, aldehydes, ketones, ketals and carboxylic acids. Amines, hydrazines and sulphides. Oxidation with ruthenium tetraoxide, iodobenzene diacetate and thallium (III) nitrate.</p>	15
2	<p>Reduction: Introduction, Different reductive process. Hydrocarbons-alkanes, alkenes, alkynes and aromatic rings. Carbonyl compounds-aldehydes, ketones, acids and their derivatives. Epoxides, Nitro, nitroso, azo and oxime groups. Hydrogenolysis.</p>	15
3	<p>Disconnection Approach and Protecting Group: An introduction to synthons and synthetic equivalents, disconnection approach, functional group interconversions, the importance of the order of events in organic synthesis, one group C-X and two group C-X disconnections, chemoselectivity, reversal of polarity, One group and two group C-C disconnections.</p> <p>Aliphatic nitro compounds in organic synthesis.</p> <p>Protecting Group: Principle of protection of alcohol, amine, carbonyl and carboxyl groups</p>	30

Semester-X
Paper 6 (Theory Organic Chemistry Group)

Course Title: Chemistry of Natural Products and Heterocyclic Compounds

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-6 Theory Subject: Chemistry		
Course Code:	Course Title: Chemistry of Natural Products and Heterocyclic Compounds	

Course outcome: This course provides detailed knowledge of all the natural products and heterocyclic compounds such as terpenoids, alkaloids and flavonoids which form the back bone of natural system of medicine such as Ayurveda, Homeopathy, Unani system of medicine. These are upcoming areas considering the interest of all pharma companies and wellness industries as these provide sustainable approach for maintaining human health. This will provide broader areas of opportunities in these related industries.

Credits: 4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:

Total No. of Lectures- = 60

Unit	Contents	Number of Lectures
1	Terpenoids, Carotenoids, Alkaloids and Steroids: Classification, nomenclature, occurrence, isolation, general methods of structure elucidation, determination and synthesis of the following representative molecules: Menthol, Morphine and Cholesterol.	15
2	Plant Pigments: Occurrence, extraction, classification, chemical characterization and functions of anthocyanins, flavonoids, xanthophylls. Chemistry and structure of cyanins, flavones, flavanol, quercetin.	15
3	Heterocyclic Chemistry (i) Nomenclature of Heterocycles / Aromatic and Non-aromatic Heterocycles Systematic nomenclature (Hantzsch-Widman System) for monocyclic, fused and bridged heterocycles. Tautomerism in aromatic heterocycles. Strain-bond angle, torsional strains and their consequences in small ring heterocycles. (ii) Heterocyclic Synthesis/Small Ring Heterocycles Three membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes, thiranes, azetidines, oxetanes and thietanes. (iii) Benzo-Fused Five-membered Heterocycles Synthesis and reactions including medicinal applications of benzopyrroles, benzofurans and benzothiophenes. (iv) Six-Membered Heterocycles with Two or More Hetero	30

	atoms Synthesis and reactions of pyrylium salts and pyrones. Synthesis and reactions of coumarins.

Semester-X
Paper-7 (Theory Physical Chemistry Group)
Course Title: Physical Organic and Quantum Chemistry

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-7 Theory Subject: Chemistry		
Course Code:	Course Title: Physical Organic and Quantum Chemistry	

Course outcomes: Their understanding of advanced quantum mechanics will help them to explain the related terms. Concept of molecular orbital and valence bond theories will help them to understand the bonding concept. Learning the supramolecular chemistry will help them in understanding the role of supramolecules in catalysis. They will also come to know the concept of kinetic isotopic effect. It will assist them to get a suitable job in the relevant industrial and scientific field.

Credits:4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Advanced Quantum Mechanics: Applications of basic concepts of quantum chemistry, Angular momentum including spin coupling of angular momentum and spin-orbit coupling. Ordinary angular momentum, generalized angular momentum, eigen functions for angular momentum, eigen values of angular momentum, operator using ladder operators.	20
2	Concepts in Molecular Orbital (MO) Theory and Concepts in Valence Bond (VB) Theory: Introduction to Hückle Molecular Orbital (MO) method as means to explain modern theoretical methods, advanced techniques in PMO and FMO theory, molecular mechanics, semi empirical methods. Quantitative MO theory – Hückle Molecular Orbital (HMO) methods, qualitative MO theory-ionization potential, electron affinities, MO energy levels, orbital symmetry, orbital interaction diagrams, MO of simple organic systems. Valence Bond (VB) configuration mixing diagrams, relationship between VB configuration mixing and resonance theory, reaction profiles, potential energy diagrams, curve-crossing model nature of activation barrier in chemical reaction.	20
3	Supramolecular Chemistry I: Molecular recognition: molecular receptors for different types of molecules including arisonic substrates, design and synthesis of co-receptor molecules and multiple recognition. Strong, weak and very weak H-bonds, utilization of H-bonds to create supramolecular structures. Use of H-bond in crystal engineering and molecular recognition. Chelate and macrocyclic effects. Cation binding hosts, binding of anions, binding of neutral molecules, binding of organic molecules. Supramolecular reactivity and catalysis. Transport processes and	20

	carrier design. Supramolecular devices, supramolecular photochemistry, supramolecular electronic ionic and switching devices. Some examples of self-assembly in supramolecular chemistry.

Semester-X
Paper-8 (Theory)

Course Title: Advanced Chemical Dynamics and Thermodynamics

Programme/Class: Master in Science	Year: Fifth	Semester: Tenth
Paper-8 Theory Subject: Chemistry		
Course Code:	Course Title: Advanced Chemical Dynamics and Thermodynamics	

Course outcome: This course provides advance knowledge on chemical dynamics, kinetics in solution, fast chemical reactions, statistical thermodynamics and thermodynamic equilibrium. This will inculcate the understanding of the terms and theories in detail.

Credit: 4	Compulsory
Max. Marks: 25+75	Min. Passing Marks:
Total No. of Lectures- = 60	

Unit	Contents	Number of Lectures
1	<p>Advanced Chemical Dynamics and Thermodynamics</p> <p>Advanced Chemical Dynamics: Theories of reaction rates: Partition functions (translational, vibrational and rotational) for diatomic molecules and application to rate processes, statistical mechanics of chemical equilibrium, theory of absolute reaction rates, thermodynamical formulation of reactions rates, theories of unimolecular reactions: Lindemann's theory, Hinshelwood's treatment, RRK treatment, Slater's theory (no derivation), Rice-Ramsperger-Kassel-Marcus (RRKM) theory (no derivation), general treatment of chain reactions, branching chains, explosive reactions between hydrogen and oxygen, oxidation of hydrocarbons, polymerization reactions (molecular and free radical), oscillatory reactions, kinetic isotope effect.</p> <p>Statistical Thermodynamics: Introduction to Statistical Thermodynamics, Thermodynamic probability and entropy, Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics, Partition function: Translational, rotational, vibrational and electronic partition functions for diatomic molecules, relation between partition function and various thermodynamic quantities.</p>	26
2	<p>Kinetics in Solution and Fast Chemical Reactions:</p> <p>Kinetics in Solution: Influence of solvent reactions between ions, reactions between ions and molecules, reactions involving dipoles, influence of ionic strength, primary and secondary salt effects, homogeneous and heterogeneous catalysis, absolute rate theory of heterogeneous reactions. Enzyme Catalysis: Michaelis-Menton mechanism, single and double intermediates, general methods for working out the kinetics of complex enzymatic reactions.</p> <p>Fast Chemical Reactions: Study of kinetics by stopped flow</p>	22

	techniques, relaxation methods, flash photolysis and magnetic resonance methods and temperature jump method.	
3	Thermodynamic Equilibrium: Free energy and entropy of mixing, chemical potential and its use in heterogeneous equilibrium, fugacity, its significance and determination, Ideal solutions and their properties, Duhem-Margules equation and its applicability, Gibb's-Helmholtz equation and its uses, Nernst heat theorem, third law of thermodynamics, entropy determination from the third law of thermodynamics.	12

Paper-5 (Practical) (Inorganic Chemistry Group)

Course Title: Advanced Experimental Chemistry-IV

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-5 Practical Subject: Chemistry		
Course Code:	Course Title: Advanced Experimental Chemistry-IV	

Course outcomes: Upon completion of this course, the students will have the knowledge and skills to separate and identify the given inorganic mixture through semimicro analysis. In this course, they will also perform the experiments related to the preparation of various coordination compounds.

Credits: 2	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Laboratory hazards and safety precautions	05
2	Qualitative analysis	05
3	Quantitative analysis	05
4	Semimicro analysis of inorganic mixture for six radicals.	15
5	Analysis of ores, alloys and inorganic substances by qualitative and quantitative methods. Or Three component metal ion analysis (one volumetric and two gravimetric methods or three gravimetric method)	20
6	Preparation Synthesis of selected inorganic compounds/ complexes and their characterization by IR, electronic spectra (UV & Visible), NMR, Mossbauer, ESR and magnetic susceptibility etc. measurements. Selection can be made from the following or any other from the existed literature. (i) cis-and trans- isomers of $[\text{Co}(\text{en})_2\text{Cl}_2] \text{Cl}$. J. Chem. Soc., 1960, 4369. (ii) Metal acetylacetonates: $[\text{Cr}(\text{acac})_3]$; Vanadyl acetylacetonate, $[\text{Cu}(\text{acac})_2 \cdot \text{H}_2\text{O}]$ etc. Inorganic Synthesis, 1957, 5 , 130; 1 , 183. (iii) Ferrocene J. Chem. Edu., 1996, 43 , 73; 1976, 53, 730. (iv) Cr(II) complexes: $[\text{Cr}(\text{H}_2\text{O})_6](\text{NO}_3)_3 \cdot 3\text{H}_2\text{O}$; $[\text{Cr}(\text{H}_2\text{O})_4\text{Cl}_2] \text{Cl} \cdot 2\text{H}_2\text{O}$; $[\text{Cr}(\text{en})_3]\text{Cl}_3$ Inorg. Synth., 1972, 13, 184. (v) Tin(IV) iodine, Tin(IV) chloride, Tin(II) iodine.	10

	<p>Inorg. Synth., 1953,4,119.</p> <p>(vi) Mixed valence dinuclear complexes of iron (III, II).</p> <p>(vii) Preparation of triphenyl phosphine and its transition metal complexes.</p> <p>(viii) Reaction of Cr(III) with multidentate ligand, a kinetic experiment (visible spectra of Cr-EDTA complex).</p> <p>J. Am. Chem Soc., 1953,75,5670.</p> <p>(ix) Other new synthesis reported in literature.</p> <p>(x) Bromination of $[\text{Cr}(\text{acac})_3]$.</p> <p>J. Chem. Edu., 1986,63,90.</p> <p>(xi) Preparation of copper glycine complex- cis- and trans- bis glycinato copper (II).</p> <p>J. Chem. Edu., 1982,59,1052.</p> <p>(xii) Relative stability of Tin (IV) and Pb (IV), preparation of ammonium hexachlorostannate, $(\text{NH}_4)[\text{SnCl}_6]$ and ammonium hexachloroplumbate; $(\text{NH}_4)_2[\text{PbCl}_6]$.</p>	
--	--	--

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in viva voce, record and overall performance.

Evaluation method	Marks
Attendance	15
Viva voce/Record and overall performance	10

Course prerequisites: To study this course, a student must have opted Sem-VI Theory Paper-1 & 2

Further Suggestions:

One exercise each from inorganic mixture analysis, gravimetric estimation and preparation shall be given in the examination.

Distribution of marks shall be as given below:

1. Mixture analysis	18
2. Gravimetric estimation	30
3. Inorganic preparation	12
4. Record and Attendance	25
5. Viva	15

Note:

- *The lab work of the student has to be evaluated and assessed carefully and periodically. A minimum of 12 experiments covering all the kind of exercises has to be performed during a semester. The semester record has to be maintained by the department/college as an official record.*
- *Less than zero mark will not be awarded.*
- *The total number of students to be examined per batch shall not be more than sixty.*
- *Duration of the practical examination shall be of 2 days (06 hours each day).*
- *Marks obtained in the practical examination have to be submitted to the Head of the department/ Principal of the College. The Head of the Department/Principal of the College will make necessary arrangement for uploading the marks onto the University exam portal. The hard copy of the award list from portal has to be submitted to the Controller of Examination, Kumaun University, Nainital.*

Semester-X,
Paper-5 (Practical) (Organic Chemistry Group)

Course Title: Advanced Experimental Chemistry-IV

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-5 Practical Subject: Chemistry		
Course Code:	Course Title: Advanced Experimental Chemistry-IV	

Course outcomes: Upon completion of this course, the students will have the knowledge and skills to separate and identify three components in the given organic mixture. They will be able to learn the extraction of organic compounds from natural sources. Spectroscopic exercise will train them to interpret the spectral data organic compounds and will make them job ready for suitable industries.

Credits: 2	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Laboratory hazards and safety precautions	05
2	Qualitative analysis	05
3	Quantitative analysis	05
4	Qualitative Analysis Separation, purification and identification of the components of a mixture of three organic compounds (three solids or two liquids and one solid, two solids and one liquid), using TLC for checking the purity of the separated compounds, chemical analysis, IR, PMR and Mass Spectral data (sets of spectra may be provided to Students for characterization of components).	20
5	Extraction of Organic Compounds from Natural Sources (Minimum of any two of the following exercises are compulsory) I) Isolation of caffeine from tea leaves. II) Isolation of casein from milk (the students are required to try some typical colour reactions of proteins). III) Isolation of lactose from milk (purity of sugar should be checked by TLC, PC and R _f value reported). IV) Isolation of nicotine dipicrate from tobacco. V) Isolation of cinchonine from cinchona bark. VI) Isolation of piperine from black pepper. VII) Isolation of lycopene from tomatoes. VIII) Isolation of β-carotene from carrots. IX) Isolation of oleic acid from olive oil (involving the preparation complex with urea and separation of linoleic acid). X) Isolation of eugenol from cloves. XI) Isolation of limonene from citrus fruits.	15

6	Spectroscopy Identification of organic compounds by the analysis of the spectral data (UV, IR, PMR, CMR & MS)	10
----------	---	-----------

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in viva voce, record and overall performance.

Evaluation method	Marks
Attendance	15
Viva voce/Record and overall performance	10

Course prerequisites: To study this course, a student must have opted Sem-VI Theory Paper-1 &2

Further Suggestions:

One exercise each from qualitative, extraction and spectroscopy shall be given in the examination.

Distribution of marks shall be as given below:

1. Organic mixture	25
2. Extraction of organic compounds	20
3. Spectroscopy	15
4. Record and Attendance	25
5. Viva	15

Note:

- *The lab work of the student has to be evaluated and assessed carefully and periodically. A minimum of 12 experiments covering all the kind of exercises has to be performed during a semester. The semester record has to be maintained by the department/college as an official record.*
- *Less than zero mark will not be awarded.*
- *The total number of students to be examined per batch shall not be more than sixty.*
- *Duration of the practical examination shall be of 2 days (06 hours each day).*
- *Marks obtained in the practical examination have to be submitted to the Head of the department/ Principal of the College. The Head of the Department/Principal of the College will make necessary arrangement for uploading the marks onto the University exam portal. The hard copy of the award list from portal has to be submitted to the Controller of Examination, Kumaun University, Nainital.*

**Semester-X,
Paper-5 (Practical) (Physical Chemistry Group)**

Course Title: Advanced Experimental Chemistry-IV

Programme/Class: Master in Chemistry	Year: Fifth	Semester: Tenth
Paper-5 Practical Subject: Chemistry		
Course Code:	Course Title: Advanced Experimental Chemistry-IV	

Course outcomes: Upon completion of this course, the students will have the knowledge and skills to do the experiments related to electrochemistry, thermodynamics and chemical kinetics will make them job ready for suitable industries.

Credits:2	Compulsory
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Laboratory hazards and safety precautions	05
2	Qualitative analysis	05
3	Quantitative analysis	05
4	Electrochemistry 1. Study of complex formation by the following methods and determination of stability constant wherever practicable: (a) Cryoscopy (b) Electrical Methods (c) E.M.F. 2. Determination of transport number. 3. Determination of liquid junction potential. 4. Conductometric determination of the equivalent conductivity at infinite dilution of a strong electrolyte. 5. Determination of the dissociation constant of a weak acid by conductivity method. 6. Conductometric determination of the equivalent conductivity at infinite dilution of a weak electrolyte. 7. Validity of Ostwald's dilution law. 8. Determination of the degree of dissociation/ association conductometrically. 9. Determination of the formula of silver ammonia complex & copper ammonia complex. 10. Determination of pH by EMF. 11. Determination of strengths of halides in a mixture potentiometrically. 12. Determination of the valency of mercurous ions potentiometrically. 13. Determination of the strength of strong and weak acids in a given mixture using a potentiometer/pH meter.	10

	Spectrophotometry and surface chemistry 1. Determination of the charge on colloidal particle. 2. Determination of λ (max) of compounds and verification of Beer's law. 3. Validity of Langmuir's adsorption isotherm. 4. Verification of the law of photo-chemical equivalence.	15
	Thermodynamics and kinetics 1. Determination of partial molar volume of solute. 2. Determination of the following thermodynamic parameters of a reaction (a) Enthalpy of activation. (b) Entropy of activation. (c) Free energy change. (d) Equilibrium constant. (e) Frequency factor 3. Kinetic Study of the primary salt effect 4. Determination of the velocity constant, order of the reaction and energy of activation for saponification of ethyl acetate by sodium hydroxide conductometrically. 5. Hydrolysis of the salts by cryoscopic method.	20

Evaluation method	Marks
Attendance	15
Viva voce/Record and overall performance	10

Course prerequisites: To study this course, a student must have opted Sem-VI Theory Paper-1 & 2

Further Suggestions:

One exercise each from electrochemistry, spectrometry & surface chemistry and thermodynamics & kinetics shall be given in the examination.

Distribution of marks shall be as given below:

1. Electrochemistry	15
2. Spectrometry and surface chemistry	20
3. Thermodynamics and kinetics	25
4. Record and Attendance	25
5. Viva	15

Note:

- *The lab work of the student has to be evaluated and assessed carefully and periodically. A minimum of 12 experiments covering all the kind of exercises has to be performed during a*

semester. The semester record has to be maintained by the department/college as an official record.

- *Less than zero mark will not be awarded.*
- *The total number of students to be examined per batch shall not be more than sixty.*
- *Duration of the practical examination shall be of 2 days (06 hours each day).*

Minor/Elective courses

Semester-VII/VIII

Paper-1 (Theory)

Course Title: Environmental Chemistry

Programme/Class: Master in Chemistry	Year: Fourth	Semester: Seventh/Eighth
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Environmental Chemistry	

Course outcomes: Upon completion of this course, the student will get the information regarding the chemical processes taking place in atmosphere, lithosphere, hydrosphere along with the chemistry of toxic chemical and pollutants.

Credits:4	Elective
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Introduction to Environmental Chemistry: Concept and scope of environmental chemistry. Environmental terminology and nomenclatures. Environmental segments. The natural cycles of environment (Hydrological, Oxygen, Nitrogen).	12
2	Atmosphere and Air Pollution: Regions of the atmosphere, reactions in atmospheric chemistry, Earth's radiation balance, particles, ion and radicals in the atmosphere. Chemistry of ozone layer. Particulates, aerosols, SO _x , NO _x , CO _x and hydrocarbon. Photochemical smog, air-quality standards	12
3	Hydrosphere and Water Pollution: Complexation in natural water and waste-water. Micro-organism in aquatic chemical reactions. Eutrophication. Microbiology mediated redox reactions. Water-quality parameters and standards: physical and chemical parameters (colour, odour, taste and turbidity). Dissolved oxygen: BOD, COD. Total organic carbon, nitrogen, sulfur, phosphorus and chlorine. Chemical speciation (Pb, As, Hg).	12
4	Lithosphere: Inorganic and organic components in soil, acid-base and ion-exchange reactions in soil, micro and macro nutrients, nitrogen pathways and NPK in soil.	12
5	Chemical Toxicology: Toxic chemicals in the environments. Impact of toxic chemicals on enzymes. Biochemical effects of arsenic, cadmium, lead, mercury, carbon monoxide, nitrogen oxides and sulphur oxides.	12

Recommended Texts:

- i. Environmental Chemistry A global perspective; Fourth Edition, Gary W. vanLoon and Stephen J. Duffy
- ii. Environmental Chemistry A.K. Day, New Age.

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in a mid-term exam, together with the performance of other activities which can include short exams, in-class or on-line tests, home assignments, group discussions or oral presentations.

Evaluation method	Marks
Mid-term exam/ in-class or on-line tests/ home assignments/ group discussions/ oral presentations	15 marks
Overall performance throughout the semester, Discipline, participation in different activities) and Attendance	10 marks

Course prerequisites: To study this course, a student must have Passed theory papers of VIII semester.

Further Suggestions:

Semester-VII/VIII
Paper-2 (Theory)
Course Title: Medicinal Chemistry

Programme/Class: Master in Chemistry	Year: Fourth	Semester: Seventh/Eight
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Medicinal Chemistry	

Course outcome: After completion of this course, the students will be able to understand the process of drug designing and to have some information about antineoplastic Agents, cardiovascular drugs, local anti-infective drugs and antibiotics and psychoactive drugs.

Credits:4	Elective
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Drug Design : Development of new drugs, procedures followed in drug design, concepts of lead compound and lead modification, concepts of prodrugs and soft drug, structure-activity relationship (SAR), factors affecting bioactivity. Theories of drug activity: general discussion. Quantitative structure activity relationship. History and development of QSAR. Concepts of drug receptors. Elementary treatment of drug receptor interactions. Physico-chemical parameters: Lipophilicity, partition coefficient, electronic ionization constants, steric, Shelton and surface activity parameters and redox potentials. Free-Wilson analysis, Hansch analysis, relationships between Free-Wilson and Hansch analysis. LD-50, ED-50 (Mathematical derivations of equations excluded).	12
2	Pharmacokinetics & Pharmacodynamics : Introduction to drug absorption, disposition, elimination using pharmacokinetics, important pharmacokinetic parameters in defining drug disposition and in therapeutics. Mention of uses of pharmacokinetics in drug development process. Introduction, elementary treatment of enzyme stimulation, enzyme inhibition, sulphonamides, membrane active drugs, drug metabolism, xenobiotics, biotransformation, significance of drug metabolism in medicinal chemistry.	12
3	Antineoplastic Agents: Introduction, cancer chemotherapy, special problems, role of alkylating agents and antimetabolites in treatment of cancer. Mention of carcinolytic antibiotic and mitotic inhibitors. Synthesis of mechlorethamine, cyclophosphamide, melaphalan,	12

	uracil, mustards and 6- mercaptopurine. Recent development in cancer chemotherapy. Hormone and natural products.	
4	<p>Cardiovascular Drugs, local anti-infective drugs and antibiotics: Introduction, cardiovascular diseases, drug inhibitors of peripheral sympathetic function, central intervention of cardiovascular output, Direct acting arteriolar dilators, Synthesis of amyl nitrate, sorbitrate, verapamil, atenolol. Local Anti-infective Drugs and Antibiotics- Introduction and general mode of action. Synthesis of sulphonamides, furzolidone, nalidixic acid, ciprofloxacin, norfloxacin, dapsone, amino salicylic acid, isoniazid, ethionamide, ethambutal, fluconazole, econazole, griseofulvin, chloroquin and primaquin.</p> <p>Cell wall biosynthesis, inhibitors, β-lactam rings, antibiotics inhibiting protein synthesis. Synthesis of penicillin G, penicillin V, ampicillin, amoxicillin, chloramphenicol, cephalosporin, tetracycline and streptomycin.</p>	12
5	<p>Psychoactive Drugs-The Chemotherapy of Mind : Introduction, neurotransmitters, CNS depressants, general anaesthetics, mode of action of hypnotics, sedatives, anti-anxiety drugs, benzodiazepines, buspirone, neurochemistry of mental diseases. Antipsychotic drugs –the neuroleptics, antidepressants, butyrophenones, serendipity and drug development, stereochemical aspects of psychotropic drugs.</p> <p>Synthesis of diazepam, oxazepam, chlorazepam, alprazolam, phenytoin, ethosuximide, trimethadione, barbiturates, thiopental sodium, glutethimide.</p>	12

Books Recommended:

- i. Introduction to Medicinal Chemistry, A. Gringuage, Wiley-VCH
- ii. Wilson and Gisvold's Text –Book of Organic Medicinal and Pharmaceutical Chemistry, Ed. Robert F. Dorge.
- iii. An introduction to Drug Design, S.S. Pandeya and U.R. Diiock, New Age International.
- iv. Burger's Medicinal Chemistry and Drug Discovery, Vol.- 1 (Chapter 9 and Ch-14), Ed. M.E. Wolf, John Wiley.
- v. Goodman and Gilman's Pharmacological Basis of Therapeutics, McGraw-Hill.
- vi. The Organic Chemistry of Drug Design and Drug Action, R.B. Silverman, Academic Press.
- vii. Strategies for Organic Synthesis and Design, D. Lednicer, John Wiley.

5. <https://nptel.ac.in/noc/courses/noc21/SEM1/noc21-cy05/>

Suggested Continuous Evaluation Methods: Students can be evaluated on the basis of score obtained in a mid-term exam, together with the performance of other activities which can include short exams, in-class or on-line tests, home assignments, group discussions or oral presentations.

Evaluation method	Marks
Mid-term exam/ in-class or on-line tests/ home assignments/ group discussions/ oral presentations	15
Overall performance throughout the semester, Discipline, participation in different activities) and Attendance	10

Course prerequisites: The students who had passed the degree of Bachelor in Science/other faculty.

Suggested equivalent online courses:

Further Suggestions:

Semester-VII/VIII
Paper-3 (Theory)
Course Title: Biology for Chemist
Biology for Chemist (For students of Mathematics background)

Programme/Class: Master in Chemistry	Year: Fourth	Semester: Seventh/Eight
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Biology for Chemist	

Course outcome: The students of this course will be able to understand the functions and significance of cell organelles.

Credits:4	Elective
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Cell as Unit of Life: The cell theory; prokaryotic and eukaryotic and eukaryotic cells; cell size and shape; Eukaryotic cell components	12
2	Cell Organelles-I: Mitochondria: Structure, marker enzymes, composition; function. Chloroplast: Structure, marker enzymes, composition; semiautonomous nature, chloroplast DNA. ER, Golgi body and Lysosomes: Structures and roles of ER, golgibody and lysosomes.	12
3	Cell Organelles-II: Nucleus: Nuclear Envelope- structure of nuclear pore complex; chromatin; molecular organization, DNA packaging in eukaryotes, euchromatin and heterochromatin, nucleolus and ribosome structure (brief). Nucleoside and Nucleotides and DNA structure.	10
4	Cell Membrane and Cell Wall: The functions of membranes; Models of membrane structure; faces of the membrane, selective permeability of permeability of the membranes; cell wall	12
5	Metabolism: Introduction, basal metabolic rate (BMR), Carbohydrate protein and lipid metabolism, cell respiration, anaerobic respiration, aerobic respiration, formation of acetal COA, citric acid cycle, electron transport system, adenosinetriphosphate, mechanism. ATP generation	14

Books Recommended:

- i. P. H. Raven, Biology, Tata MacGraw Hill.
- ii. P. Sheeler, Cell and Molecular Biology, John Wiley.
- iii. N. A. Campbell, Biology Pearson.
- iv. L. Styer, Biochemistry, Freeman & Co.

- v. Outlines of biochemistry. Fourth edition (Conn, Eric E.; Stumpf, P. K.). Wiley India Pvt. Limited

SEMESTER VII/VIII

Paper-4 (Theory)

Course Title: Mathematics for Chemist (for students of biology background)

Programme/Class: Master in Chemistry	Year: Fourth	Semester: Seventh/Eight
Paper-1 Theory Subject: Chemistry		
Course Code:	Course Title: Mathematics for Chemist	

Course outcome: The students of this course will be able to understand fundamentals of mathematical concepts.

Credits:4	Elective
Max. Marks: 25+75	Min. Passing Marks:.....

Total Number of Lectures = 60

Unit	Contents	Number of Lectures
1	Mathematical Functions: Polynomial expression, exponential function, trigonometrically function. inverse trigonometrically function. Logarithms and anti logarithms	10
2	Curve Sketching/Graph: Inclination of a line and the slope of a line, General equation of straight line, slope-intercept form, slopepoint form. Two point form, Intercept form, Parallel and perpendicular lines	12
3	Differentiation: Differentiation formulas, Concept of maximum and minimum, Rules of finding maxima and minima, Partial differentiation, Euler reciprocal relation, exact and in exact differentials, Chain rule for partial differential	14
4	Integration: Methods of integrations, substitution, partial function, by parts, successive, reduction, integration formulas including concept of limit	10
5	Fundamentals of Mathematical Relations: Permutations and Combination, Probability, vectors mathematical relations, Vectors, Matrices, Determinants, Complex number, Series, Stirling approximation, Roots of quadratic equation. Methods of solving equation. Coordinate systems in three dimensions (Cartesian, spherical and polar).	14

Books Recommended:
